

The new range of CTX water treatment tablets with **TECNOLOGÍA PUREDROP®** has many advantages.

BORIC ACID FREE

HEALTHIER

Removing boric acid from our new formula makes these tablets healthier than others.

MORE EFFICIENT

PUREDROP® TECHNOLOGY makes the tablets last longer. It also makes the release of chlorine controlled and constant. It thus inhibits dangerous concentrations of disinfectant in the water.

CLEANER

Our tablets do not leave scum on the surface. Savings will be made on the maintenance products used and your pool will be cleaner.

Look after what you love

MultiAction 250 g

Multi-action 250-g chlorine tablets that act as a disinfectant, algicide and flocculant.

A single dose will remove bacteria, viruses and microorganisms in general from pool water, which prevents algae from growing and keeps the water crystal clear.

Perfect for occasional use to forget about pool maintenance as it does all the work for you. Ideally, it should be combined with maintenance chlorine when time is short.

ClorLent 250 g

Slow-dissolving 250-g trichloride tablets.

Made of non-combustible sodium, which is highly recommended for disinfecting pool water and keeping it crystal clear and hygienically safe.

Also known as **slow-dissolving or maintenance chlorine**, it is essential for the ongoing, regular treatment of pools as the disinfectant is only released when the water requires it.

The tablet form makes it easy to use and dispense: a tablet is placed in the skimmer and its disinfecting properties are gradually released.

As its formulation contains a stabiliser, it prevents the product from evaporating and quickly disappearing from the pool water.

ClorShock 20 g

Effervescent, fast-dissolving 20-g tablets of dichlorine for pool water shock treatment.

Fast-dissolving dichlorine is **ideal for recovering the quality of pool water** if treatment has been neglected or for occasional times when many bathers have been in a pool or after a storm.

Easy to use and **dispense in the skimmer basket.**
