### **DOSAGE AND INSTRUCTIONS FOR USE:**

**Initial treatment:** Add 15 gram of Dichloroisocyanuric Acid Granules (0200GR) for every m<sup>3</sup> water. After 2 hours, adjust the water pH between 7,2 and 7,6 using either Solid pH Reducer (0010) or pH Enhancer (0020).

**Maintenance treatment:** Once we have the water pH adjusted, add 1 tablet of Eco multiaction tablet (1393) for every 25 m<sup>3</sup> water during 7 days.

These doses are the ones suggested and can be modified according to the own characteristics of every swimming pool, climate, etc.

The initial treatment (Superchloring) will have to be repeated whenever you notice a lack of transparency in the water.

Introduce the necessary eco multiaction tablets (1393) doses inside the skimmers. Connect the filtering equipment after and you will have the product dissolved in the water, because water will be flowing through the skimmers.

It is essential that the entire volume of the pool water is recirculated through the scrubber equipment daily.

The residual free chlorine will be between 0.5 and 2 mg/l. This value will easily be measured using an analyser chlorine and pH case. This control will have to be done twice a day minimum.
