

## CTX-500C AlgaStop Power

### **DESCRIPTION:**

Fast-acting compound based on surfactant products with strong bactericide, algicide and fungicide powers aimed at preventing the formation and development of algae in swimming pool water.

This is a highly concentrated product with the following benefits:

#### ***Environmentally friendly***

- Highly concentrated product.
- Less use of raw materials, packaging and energy in its production.
- 50% saving on CO<sub>2</sub> emissions in transporting it.

#### ***Application control and minimum waste management costs***

- Exact control of product used (dispenser cap).
- Reduction in waste management cost (Ecoembes).

#### ***Minimum occupational risks***

- Safe handling and no contact with the chemical product.
- 80% reduction in load weight.
- Easier, cleaner and more convenient.

#### ***70% saving on storage and transport space***

- Reduction in product volume thanks to its high concentration.

### **PROPERTIES:**

Appearance .....	Liquid
Colour.....	Light blue
pH (concentrated at 20°C). ....	6.5 – 8.5
Density (20 °C).....	0.95 – 0.05 g/cm <sup>3</sup>

## **CHARACTERISTICS:**

Not applicable.

## **DISPENSING AND USE:**

- Algae prevention.

**Initial treatment:** Add 180 ml (3 x 60ml) of product for every 50 m<sup>3</sup> of water.

**Maintenance treatment:** Add 40 ml of product a week for every 50 m<sup>3</sup> of water.

The initial treatment can be repeated every time the water appears not fully transparent.

These guideline doses can be changed depending on the characteristics of each swimming pool, weather conditions, etc.

Pour the required product dose into a container with water and spread the solution evenly all over the surface of the pool. The product should preferably be added at dusk and without swimmers in the pool.

### **- Periodic pool disinfection:**

Before filling the swimming pool, you are recommended to impregnate the walls and bottom with a solution of the product (160 ml of product in 10 l water), forming a protective film acting as a disinfectant.

### **- Disinfecting the pool surround:**

The areas that form part of the pool surround can become slippery, as well as transmitting disease. To prevent these problems we advise daily application of a solution of the product (960 ml of product in 10 l of water) using a spray or watering can. After an hour, the areas can be rinsed with plenty of water.
