

## CTX-370 Clorlent 250g without boric acid

**NEW RANGE OF TABLETS** for the treatment of swimming pool water with **Technology Puredrop®** that allows more balanced disinfection and with a longer duration in the time.

INQUIDE has developed a healthier product, thanks to our new **patented formula without boric acid**, fulfilling and anticipating the European regulations on the restriction of the above mentioned substance (most of chlorine tablets contain that substance which is classified as toxic for the human reproduction and potentially toxic for the fertility)

Our **NEW** additive is not harmful to the human health. In addition, it is **more effective**, because it allows a slower and homogeneous dissolution of the tablet and therefore a controlled and constant liberation of chlorine. Hereby the dangerous disinfectant excess is avoided in the water and its consumption decreases.

In addition, thanks to its formula, it does not leave residues on the surface, decreasing the use of other chemical products and the use of water to clean the filter.

All that is summarized in our **NEW** Technology Puredrop®:

### DESCRIPTION:

Solid component **WITHOUT BORIC ACID**, with a slow dissolution, highly stabilised, for the disinfection and maintenance of crystalline and hygienically pure water.

### PROPERTIES:

Appearance .....	solid in compacts
Colour .....	White
Available chlorine.....	85%
pH (1%).....	2 - 3

### CHARACTERISTICS:

- **Healthier:** it does not contain harmful additives to the health.
- **More effective:** slower and homogeneous dissolution of the tablet, no disinfectant excess and its consumption decreases.

- **Cleaner:** Competition use NOT soluble additives in water which means that tablets leave some residues in the surface, which have to be removed by a filter or a flocculants. Our new tablets do NOT leave residues on the surface, decreasing the use of other chemical products and the use of water to clean the filter.
- **Safer:** According to the labelling regulations on substances and dangerous preparations, the product has a minor danger degree in comparison with the chlorinated comburent products

The non comburent products are safer during its storage in comparison with the chlorinated comburent products

If we compare the products classified as *comburent*, the product does not have storage limitations, in accordance with the SEVESO II regulation.

## DOSAGE:

**Initial treatment:** Add 15 gram of Dichlor granules per m<sup>3</sup> of water. Wait for two hours before adjusting the pH level between 7,2 - 7,6 using either Solid pH Reducer (0010) or pH Enhancer (0020).

**Maintenance treatment:** Once we have the pH water adjusted, put into the skimmers basket 1 compact of product for every 30 m<sup>3</sup> of water. Do this every 7-10 days.

These doses are the ones suggested and can be modified according to the own characteristics of every swimming pool, climate, etc.

This product can neither be in direct contact with the swimming pools bade with liner, polyester or vinyl, nor with painted swimming pools because it may cause discolorations.

The initial treatment (Superchloring) will have to be repeated whenever you notice a lack of transparency in the water.

## INSTRUCTIONS FOR USE:

Introduce the necessary product doses inside the skimmers. Connect the filtering equipment after and you will have the product dissolved in the water, because water will be flowing through the skimmers.

It is necessary that all the water in the swimming pool flow again through the purifier equipment.

The residual free chlorine will be between 0.5 and 2 mg/l. This value will easily be measured using an analyser chlorine and pH case. This control will have to be done twice a day minimum.

## **NOTE:**

• **Toxic for human reproduction:** is a hazard associated with some chemical substances, that they will interfere in some way with normal reproduction. It includes adverse effects on sexual function and fertility in adult males and females, as well as developmental toxicity in the offspring.
